

Assignment Goals:

- Familiarize yourself with the Big Picture in the Artificial Intelligence world
- Reflect on AI and your own life
- Consider the future developments of AI

Your Task:

This assignment must be completed individually and must be your original work.

Skim through two reports: [report1](#), [report2](#). These are long articles, but you will find many sections interesting. We do not ask you to read word by word; some [advice](#) on how to skim.

Predicting the future is fraught with danger. Report1 represents humanity's best prediction on AI, made in 2021 [1]. You will notice that it did not foresee the emergence and impact of Large Language Models (LLMs) such as GPT4. Report2 came out in 2023 and discussed many interesting things GPT4 can do [2]. (Note: The authors of Report 2 were from Microsoft. Microsoft has a vested interest in OpenAI, which developed GPT4.)

This makes you wonder what we do not foresee *now*. **Write a short essay** (around 500 words, in English) answering the following prompt: "Make a prediction about the next big advancement in AI in two years. Considering how LLMs have impacted society, how do you envision your predicted advancement will be received by humanity?"

Cite at least 3 references. You should include the two articles above and at least an extra one, which can be a book, scholarly paper, news article, or social media post. Use a reference format similar to this assignment. Be aware of the rubric below as you write! Note that references will *not* be counted in your final word count.

We have included some advice for how to find additional sources using Google Scholar in the "UsingGoogleScholar.pdf" file attached to the Canvas assignment.

Deliverables:

When submitting to **Gradescope**, the essay must be in a plain .txt file called **essay.txt** and the references in a plain .txt file called **references.txt**. **The file names are case sensitive so please make sure the file names are correct.**

Please note that this assignment follows an essay format, which is different from all other assignments in this course, which will be program-based. Be aware that "Number of Words" and "Language and Submission Format" in the rubric below will be autograded, while the remaining aspects will be manually graded after the due date. Expect about a week for the TAs to review all the essays, and an announcement will be made on Piazza upon completion, indicating the start of the 72-hour regrade request window. This is different from [the workflow all remaining assignments will follow](#).

Due Date:

Feb 4, Tuesday, 11:59 PM (CST)

Comments:

There should be no identifying information (like name, student ID, etc.) in the essays. We do not prohibit nor encourage the use of LLMs in helping you write. If you do use such systems, please add it as an additional citation (although **citing an LLM will not count towards the required 3 citations**); **Furthermore, in the citation please show your prompts so we see how you elicit useful materials from the language models.**
